SUMMARY

Senior technology executive and IT professional with more than 30 years of professional and management experience spanning enterprise IT management, network architecture and engineering, infrastructure management, digital transformation, and emerging technologies.

In recent years, I have expanded my professional focus significantly toward Artificial Intelligence, Machine Learning, and their practical application in enterprise environments, with hands-on experience in AI solution design and development, model training and fine-tuning, intelligent agent development, prompt engineering, GPU-based computing infrastructure, and deployment of intelligent systems.

My professional background combines more than three decades of experience in Enterprise IT, Network Engineering, Infrastructure Management, and Technology Leadership with current expertise in AI/ML, Large Language Models, Intelligent Agents, and AI Infrastructure.

A significant part of this career has been built in Oil & Gas and industrial environments, including more than a decade with the Iranian Offshore Engineering and Construction Company (IOEC), where I built and managed enterprise IT infrastructure for a large engineering and construction organization. My background also includes technology leadership at HEPCO, executive-level telecommunications experience, and IT management roles in major industrial and healthcare organizations.

Today, my primary focus is on combining deep experience in IT, networking, infrastructure, and Oil & Gas environments with Artificial Intelligence and Cybersecurity, particularly in AI-powered SOC, OT/ICS cybersecurity, and the protection of critical infrastructure and industrial environments.

My professional objective is to design and implement intelligent, secure, reliable, and deployable solutions for real-world enterprise environments—solutions that deliver not only technological innovation, but also measurable operational and business value.

EDUCATION

University of Tehran

Bachelor of Science in Electrical Engineering

1985 – 1991

EXPERIENCE

AI & Cybersecurity Consultant

Persia Telecom

2025 – Present

Tehran, Iran

Following my previous executive and board-level involvement with Persia Telecom, I have returned in a consulting capacity focused on the application of Artificial Intelligence to Cybersecurity, SOC operations, and industrial OT environments.

- Designing the architecture and development approach for an AI-powered SOC for security event analysis and management.
- Applying AI to security event correlation, prioritization, investigation, and analysis.
- Designing an intelligent layer for collecting and analyzing SIEM, EDR, and other security telemetry.
- Using AI to reduce alert volume and transform fragmented alerts into actionable, prioritized security incidents.
- Developing intelligent capabilities for investigation timeline generation and incident summarization.
- Focusing specifically on OT/ICS cybersecurity and the security differences between operational environments and traditional IT.
- Investigating AI applications for security monitoring and analysis within Oil & Gas and critical infrastructure environments.
- Designing Hybrid and On-Premise AI architectures for sensitive and security-constrained environments.
- Combining extensive experience in IT, networking, infrastructure, and Oil & Gas with modern AI technologies.

Independent AI & Technology Developer / Consultant

January 2025 – Present

Self-Employed

Providing specialized consulting and development services in Artificial Intelligence and advanced technology solutions for enterprise and technical projects.

- Designed and built high-performance GPU computing servers for AI model training and inference.
- Designed and optimized AI infrastructure architectures based on computational requirements and model characteristics.
- Developed complete AI applications spanning Frontend, Backend, and API services.
- Developed thousands of lines of Python code for intelligent systems and LLM integration.
- Worked with advanced language models and Prompt Engineering techniques to improve accuracy and output quality.
- Designed and developed Intelligent Agents capable of performing complex, multi-step tasks.
- Provided consulting on model selection, infrastructure, architecture, and deployment strategies for AI solutions.
- Designed AI solutions with emphasis on security, reliability, performance, and real-world deployment.

IT Consultant

October 2023 – Present

Mehr Eye Hospital

Tabriz, Iran

Providing IT consulting services focused on infrastructure modernization and the introduction of intelligent technology solutions within a healthcare environment.

- Designed and optimized enterprise network infrastructure supporting critical hospital operations.
- Managed and supervised servers, storage, switches, firewalls, and other infrastructure components.
- Implemented and optimized security mechanisms for protecting sensitive information and data.
- Designed and strengthened Disaster Recovery and Business Continuity capabilities.
- Developed intelligent solutions for monitoring network and infrastructure performance.
- Designed technical training programs to enhance the capabilities of IT personnel.

IT Consultant

October 2023 – July 2024

Shahid Bahonar Copper Industries Co. (CSP)

Tehran, Iran

- Managed and optimized network infrastructure and enterprise IT systems.
- Designed and implemented Intelligent Monitoring solutions for industrial environments.
- Monitored infrastructure performance and planned capacity and reliability improvements.
- Developed Predictive Maintenance and Automation solutions to improve operational efficiency and reduce downtime.
- Developed and optimized backup, recovery, and business continuity mechanisms.

IT Manager

April 2017 – February 2023

Shahid Bahonar Copper Industries Co. (CSP)

Kerman, Iran

Managed comprehensive IT operations for a major industrial organization and led the IT team across infrastructure, networking, and enterprise systems.

- Managed and maintained enterprise network and IT infrastructure.
- Planned and executed hardware and software upgrade projects.
- Managed IT teams and directed infrastructure modernization and development initiatives.
- Developed strategic plans for technology infrastructure growth and modernization.
- Contributed to digital transformation initiatives and established infrastructure foundations for future intelligent solutions.
- Managed the performance, security, and availability of critical IT services.
- Coordinated technology projects with multiple organizational departments and stakeholders.

Network & Communications Manager

October 2016 – March 2017

NAVACO Information Technology Co.

Tehran, Iran

- Managed network architecture and communications infrastructure.
- Optimized network performance, scalability, and reliability.
- Planned capacity and infrastructure expansion.
- Coordinated network and enterprise communications activities.

IT Manager

Global Petro Tech

October 2010 – November 2011

Tehran, Iran

Managed mission-critical communications systems supporting offshore Oil & Gas drilling operations.

- Managed communications and data-transfer systems across operational sites.
- Managed satellite communications for drilling locations across geographically distributed environments.
- Maintained high availability and reliability for safety-critical communication systems.
- Supported reliable data transmission between field operations and management centers.
- Managed communications infrastructure supporting offshore operations.

Chairman of the Board

Persia Telecom

May 2004 – December 2010

Tehran, Iran

Served as a board-level executive with responsibility for strategic direction, corporate governance, and participation in major technology and investment decisions.

- Provided strategic oversight of the company's technology and telecommunications activities.
- Participated in planning major infrastructure investments and technology development initiatives.
- Established and strengthened governance and executive decision-making frameworks.
- Participated in business development and market expansion planning.
- Oversaw technology development and communications infrastructure initiatives.

IT Manager

Iranian Offshore Engineering and Construction Company (IOEC)

January 1997 – September 2010

Tehran, Iran

One of the most significant stages of my professional career was more than 13 years of continuous experience in the Oil & Gas industry with the Iranian Offshore Engineering and Construction Company (IOEC).

During this period, I was responsible for designing, developing, and managing the organization's IT and network infrastructure. I built and developed the IT infrastructure from the ground up for a major engineering and construction organization with more than 1,200 employees and international operations.

- Designed and established the organization's IT and network infrastructure from the ground up.
- Designed and developed Enterprise Network architecture for an organization with more than 1,200 employees.
- Implemented and managed critical IT services and enterprise systems.
- Developed communications infrastructure supporting engineering, construction, and project operations.
- Managed networks, servers, communications systems, and enterprise IT services.
- Planned infrastructure expansion in response to evolving technology and operational requirements.
- Managed IT security, reliability, availability, and operational continuity.
- Led technical teams and managed infrastructure projects.
- Established and maintained a stable IT environment supporting international operations and major Oil & Gas engineering projects.

Head of Machinery Services – After-Sales Services

HEPCO (Heavy Equipment Production Co.)

October 1992 – January 1997

Tehran, Iran

At HEPCO, I was responsible for a major technology modernization and enterprise systems transformation initiative.

At the time, the organization's technology environment was based on legacy Mainframe architecture. One of my key responsibilities was leading the transition from this architecture toward distributed PC-based systems.

- Led the migration of enterprise systems from Legacy Mainframe architecture to distributed PC-based systems.
- Designed and implemented integrated software solutions for Finance, Sales, and Inventory operations.
- Managed technology infrastructure for a manufacturing organization with more than 800 employees.
- Developed software solutions aligned with operational and management requirements.
- Managed IT personnel and technology development and modernization projects.
- Established technical foundations to improve organizational productivity and information accessibility.
- Played a direct role in the organization's transition from legacy technology to modern distributed computing architectures.

TECHNICAL SKILLS

AI and Machine Learning solution design and development

AI model training, fine-tuning, and optimization
Large Language Models (LLMs) and Generative AI
Intelligent Agent architecture and development
Prompt Engineering and optimization
AI application architecture and intelligent systems
GPU-based computing and AI infrastructure design
MLOps and AI workflow automation
Full-Stack AI application development
LLM integration with enterprise systems
AI-powered SOC architecture
Security event correlation and analysis
SIEM / EDR and security telemetry
Alert prioritization and incident analysis
AI-assisted security investigation
Cybersecurity architecture
OT / ICS cybersecurity
Critical infrastructure security
Cybersecurity for industrial and Oil & Gas environments
On-Premise and Hybrid AI architectures for sensitive environments
Enterprise IT management and architecture
Enterprise network architecture and management
Cisco networking
Network security
Data Center management
High-Performance Computing and GPU infrastructure
Linux / Windows Server
VMware
Cloud infrastructure and Microsoft Azure
Kubernetes and Docker
Disaster Recovery and Business Continuity
Digital Transformation
Technology Strategy and IT Governance
Technical team and project management
Vendor management and technology procurement
Python
SQL
JavaScript
Shell Scripting
TensorFlow
PyTorch
Scikit-learn
Hugging Face Transformers
API Development
Backend Services
Full-Stack Development
Database Design and Optimization
System Integration
Automation

Git and CI/CD
PostgreSQL
MySQL
MongoDB
Redis
SIEM
EDR
Linux
Windows Server

CERTIFICATIONS

Microsoft Azure for Data Engineering
Azure Administration Essential Training – 2019
Data Storage in Microsoft Azure
Networking and Administration Fundamentals
Kubernetes: Native Tools
Information Security Management Systems (ISMS)

PROFESSIONAL PHILOSOPHY

My professional focus is on applying emerging technologies—particularly Artificial Intelligence—to real-world and complex organizational challenges, while maintaining high standards of security, reliability, scalability, and operational excellence.

More than three decades of experience in IT management, networking, infrastructure, enterprise systems, and the Oil & Gas industry, combined with current expertise in Artificial Intelligence, Machine Learning, Large Language Models, and Cybersecurity, enables me to approach technology challenges from an integrated technical and management perspective.

Today, my primary area of interest and professional focus lies at the intersection of AI, Cybersecurity, and OT, particularly the development of intelligent solutions for SOC operations, industrial cybersecurity, and the protection of Oil & Gas and critical infrastructure environments.

My objective is not to build technology simply to demonstrate technical capability, but to create practical, trustworthy, secure, and value-driven solutions that organizations can actually deploy and use.
